
Sub Menu Hight

Posted by propolis - 2011/12/13 19:43

Hi,

I have a horizontal menu and from a previous post I added some CSS code in the module CSS box to change the colour of the menu / submenu which works fine.

Now I tried various css code from the forum to make the space between sub menu items bigger, by adding it to the same module CSS box, but it does not work.

Look at my Site

Thanks

Eddie

Hello,

Try to use the next CSS rule:

```
#ariyui81.yui-skin-sam UL UL LI A.yuimenuitemlabel
{
  padding-top: 5px !important;
  padding-bottom: 5px !important;
}
```

Regards,
ARI Soft

Hi,

Thanks again for great support.

I was about 80% there, but then got stuck.

This works fine now.

Thanks

Eddie

:)
