
SEO Question ?

Posted by Derek - 2009/08/27 16:58

Hi - Well done on the ARI YUI menu.

I'm just wondering about SEO - I've read that its better to avoid javascript based menus - as search engines crawlers can not pick out the content from the javascript. CSS based menus are preferable.

How does the ARI YUI menu relate to SEO - are there any recommendations are guidelines ?

Many thanks,

Derek

Hello,

This SEO tip regarding dynamic menu, but ARI YUI Menu build menu from markup and search engine find HTML structure menu without problem, javascript in this module use for creating some visual effect.

Regards,
ARI Soft
