Add second menu and first one get messed

Posted by jrdavisgo - 2012/01/10 19:17

Hi.

With much time I configurate the ARI YUI Menu (MENU PRINCIPAL on the right column): I changed the image file "menuitem_submenuindicator" (in \modules\mod_ariyuimenu\mod_ariyuimenu\js\assets\menu\sam), etc.

When I added a SECOND Ari Yui Menu, automatically things went bad with the first menu, and then after, also the second Menu get messed. The submenu indicator disapears, and the width of the submenus get shorten, the separator between menu items dissapears.

I deleted the Second Menu, but things haven't fixed.

Could you give me anidea of what went bad?

As follow this is my personalize CSS parameter in the Module:

```
body#bd.bd .column
{
 position: relative;
 z-index: 3000;
 overflow:visible;
}

.yuimenu ul li
{
background-image: none;
}

body .yui-skin-sam .yuimenubaritem-active
{
 background: none orange;
}

#ariyui28 .yuimenubar ul, #ariyui28 .yuimenu ul {
    background-color: #E1F2FA /*#02A1DB*/;
}

#ariyui28.yui-skin-sam .yuimenu .bd {
   border: 1px solid #E1F2FA;
overflow:visible;
}

#ariyui28.yui-skin-sam UL LI A.yuimenuitemlabel {
   color:#006699;
   height:24px;
}

#ariyui28 A {
  font-size: 12px !important;
}
```

Could you please guide me in what I did wrong? And how I should add a second menu? The site is www.contraloriasai.gov.co

Cordially,

JRD

Hello,

The module can't load CSS file. 403 error occurs. Check that /modules/mod_ariyuimenu/mod_ariyuimenu/css_loader.php file has appropriate permissions.

Hi. Thank you for such a quick reply.

Probably it show that the CSS is not loaded, becasue I am using a Template Framework that is configurated to Join, Minify and Compress the CSS and JS files to provide a faster page load.

The file you mentioned (css_loader.php) has permission 644.

Would you need me to change the configuration of the template framework, for not to join the CSSs under one file?

It is not possible to load css_loader.php file. You can try to load it into a browser and see 403 HTTP occurs.

I am so sorry. You are right!

Recently someone from our Office Team modified the .htaccess file with a "Deny from all"(for .PHPs). I commented the line. Now the css_loader.php is loading.

Now you can see that the first ARI YUI MENU (Menu Principal) get affected: the submenu indicator disappeared and the submenu widht get shorten; while the Second ARI YUI Menu (Rendiciones) has no problem.

Set "Safe mode" parameter to "Yes" in module settings for the second menu.

I set "Safe mode" parameter to "Yes" in module settings for the SECOND Menu.
and set the same parameter to "No" in module settings for the FIRST Menu, and things GET FIXED.

I thus have one single concern, with the FIRST menu (Menu Principal): I noticed a broad white line on top and on the bottom of the Menu, as well as on all of its submenu. I have similar parameters for both Menus in the CSS parameter. Could you guide me to the cause of the WHITE LINE STRIPS on top/bottom of the FIRST Menu.

White lines are defined in a site template CSS file. Add the next CSS rule to avoid it:

```
.yui-skin-sam .yuimenu ul
{
 margin: 0;
}
```

Thanks you so much. It is solved!

Your ARI YUI Menu Module is excelent, and your support is yet more,and highly appreciatable!

I thus noticed something ultimately, of which I am NOT sure if it got to do with the Menu module; but in three ocassions I changed the ORDER of the menu items of the MENUS associated with the two ARI YUI Menu Modules I have on the webpage; the changes were done succesfully. But after a couple minutes, refreshing and refreshing the page, the ORDERS of the items returned back to its previous order; and the changes are not only visually, but when I checked the Joomla Backend, in deed the orders or the menu items are reversed! And aditionaly, the order of the items on the Main Menu (the Horizontal one that come with the template) also get changed aleatoraly.

Again, I am NOT assuring that what happen has any thing to do with the ARI YUI Menu. It could be a BUG in joomla core, or in the Template, etc. ??

One again thank you so much for your kind and excelent support.

About the aleatory changing of the ORDER of some MENU ITEMS, I found that the cause of the problem is from Joomla Backend.

Plese forget my last reply.

Thank you,

JRD
