## Sub menus deactivate in one menu tree

Posted by JCP - 2012/01/28 11:20

---

Hi,

I'm not sure what I have done to cause this. When I select a sub-menu item from just one of the main menu items, the page loads, but all sub-menu items disappear. This only happens within the 'news' item in my menu.

Please see [www.stmarys-berkeley.co.uk/news](http://www.stmarys-berkeley.co.uk/news)

Many thanks

=====

Hello,

Provided page contains a javascript error which is not related to "ARI YUI Menu", but stop javascript code execution on the page. Fix this error and the menu should work fine.

Regards,  
ARI Soft

Thank you!

I've found the offending java script, now to fix it.

Thanks again.
