
Top menu ARI YUI - can the submenu be showed...

Posted by lalamaria - 2012/02/02 18:08

Hello,
THank you for great product and great support!!

I am wondering if this is possible to do with this module:

when you click on a submenu in the top menu, can that parent menu with submenu be seen as a list on the left side position (e.g. main menu side)? Here is the example what I would like to do:

<http://www.cep.eu/en/analyses-of-eu-policy/institutional-law/>

THanks much!!
Maria

Hello,

You can show another menu module in left position. For example standard Joomla! menu module.

Oh I see. If you have some time - can you describe how to do that? I do not understand how to link joomla and ARI menu...

THanks!
M.

It is not necessary to link our module with another module. Menu modules works with menus created in Joomla! menu manager.
