Presentation issues

Posted by allanfalconer - 2012/02/26 16:08

_____

Hi,

I have a few issues I am trying to fix. The menu works great but it is just the following:-

1 Sub-menu 'hiding' behing other items

2 Submenu transparent in safe mode. If I do not use safe mode the main menu is unreadable (text colour against transparent background).

3 Can each box be a set size so that the menu looks balanced?

4 Can the menu be centred?

Thanks for any help.

Allan

_____

Hello,

1, 2 and 4. Add the next CSS rules:

```
#ja-mainnav .yuimenubar li ul
{
 position: relative;
 width: auto;
}

body #ja-mainnavwrap
{
 position: relative;
 z-index: 2;
}

body #ja-containerwrap-fr
{
 position: relative;
 z-index: 1;
}

body #ariyui51
{
 text-align: center;
}

body #ariyui51_menu
{
 display: inline-block !important;
}
```

3. Each LI element contains yuimenuitem-itemITEM_ID CSS class, where ITEM_ID is menu item ID. It can be used to create a custom CSS rule to change width of a menu item.

Regards,
ARI Soft

Fantastic support.

Main issues resolved but I could not understand about the item 3 (fixed width)!

I have also added a 2nd menu and copied the details acrosss.....But it will not centre?

_____

For example if you want to change width of menu item with ID equals to 126, use the next CSS rule:

```
LI.yuimenuitem-item126
{
 width: 250px;
}
```

Use the following CSS rule to center the second menu:

```
body #ariyui72
{
 text-align: center;
}

body #ariyui72_menu
{
 display: inline-block !important;
}
```

Regards,
ARI Soft

_____

Thanks again for the quick reply.

I have been advise just to go with the one menu. However, it seems to still go behing the 'frontpage slideshow'....

_____

It seems your site template was modified. Add the next CSS rule:

```
body #ja-containerwrap-f
{
 position: relative;
 z-index: 1;
}
```

Regards,
ARI Soft
