
somehow does not work...

Posted by iaweb - 2012/04/20 05:41

I have no clue why (maybe my template clashes with it) but the Yui Menu does not work on our site...

<http://songsaa.palmeirah.com/>

Even if I enable safe mode, it still does not work properly...

Any help is highly appreciated...

On a second note, I would like to change the Highlight color and make the background to a 15% opacity, how can I do that?

Thanks

Maxie...

Hello,

Open browser's error console (press Ctrl + Shift + J in Firefox browser), it contains a lot of javascript error which are not related to "ARI YUI Menu", but it stops execution of javascript on your page. Fix the errors and the module will work fine.

Regards,
ARI Soft
