Help configuration
Posted by Newki75 - 2012/07/29 10:52

Dear all,

After having tried different products and without any support, I've read that ARI YUI Menu works perfectly and easily :-) But I don't manage to :-(maybe it's because I try everything for 3 days and I need a new eye on my pb, so could you help me please ?

I've uploaded your extension in Joomla 1.5.26, and I've activated the module. I use template siteground-j15-29.

The concerned menu is my Top menu : here is a few printscreen.
- 002B : my menu configuration, Bracelets and Sautoirs have Bijoux as parent http://www.ari-soft.com/images/fbfiles/images/ScreenShot002B.jpg

- 005 : how it looks on Firefox, Sautoirs is next to Bijoux and Bracelets under

Regarding your module, here is the configuration :

And I've also added a line in my Joomla template.css as I could read on one topic :

```
.yui-skin-sam .bd UL LI {
background-image: none;
}
```

I also attache my css code, because my site is still on local. http://www.ari-soft.com/images/fbfiles/files/templatecss.txt

I really hope you can help me
Thanks in advance and best regards
Marine

Hello,

Provide a link to a page where we can see the menu and an image where we can see what do you want to achieve.

Regards,
ARI Soft

Sorry but as I had no answers on different forums, I've changed my template and found one which is working with no extension.
Thanks anyway for your answer
