
How to change skin in Joomla 1.5

Posted by bogastyle - 2010/01/19 11:39

I want to create my skin!
How to tell published modul to use my skin?

Hello,

You can create your own skin, create folder with theme name in
/modules/mod_ariyuimenu/mod_ariyuimenu/js/build/menu/assets/skins/ folder and place skin files to this folder. Then
open /modules/mod_ariyuimenu/mod_ariyuimenu/templates/main.html.php file, find line #52 and change the following
code:

```
AriDocumentHelper::includeCssFile($siteUrl . 'css_loader.php?menuId=' . $menuId);
```

to

```
AriDocumentHelper::includeCssFile($siteUrl . 'css_loader.php?menuId=' . $menuId . '&theme=');
```

Where is name of skin folder.

Regards,
ARI Soft

Thank You! I'll try it!

But in future probably the easy way is to add a field in modul administration where the users to write skin name!

I have a little more difficult issue to resolve?
The site which I do use different templates for different items.
How can I change the menu theme according to the site templates? Suppose that the menu theme is called as a site
template.

Is there a way instead of manually specify the name, that you showed me - it automatically sets the theme name same as name of the site template?

Example:

if
site template - root/templates/mytemplate

then
menu theme -> /modules/mod_ariyuimenu/mod_ariyuimenu/js/build/menu/assets/skins/mytemplate

Hello,

ARI YUI Menu is open source module and you can change it for your needs. In you case you can open /modules/mod_ariyuimenu/mod_ariyuimenu/templates/main.html.php , find line #52:

```
AriDocumentHelper::includeCssFile($siteUrl . 'css_loader.php?menuId=' . $menuId);
```

and add your conditions for choosing necessary theme, you can pass it with help 'theme' request parameter.

Regards,
ARI Soft
