Submenu CSS

Posted by vicmorgie - 2012/09/07 14:53
_____

I am confused. I am trying to change the css (width, color, bg image, hover image) for the ARI YUI menu at the bottom of this page - http://216.119.72.72/index.php/performance.

I have tried to add rules to the CSS window in the module but am having no luck. I have read the YUI docs that you point to but am still stumped. Do these edits need to take place in the CSS files (safe_menu.css or safe_menu_rtl.css) or can they happen inside the module panel?

Thanks,

==

Hello,

Custom CSS rules can be placed in "CSS Styles" parameter in module settings. What CSS rules do you use?

Regards,
ARI Soft

_____

I have now managed to get the rules to work but I can't seem to get ride of the default shadow. I am also trying to set a unique bg image for the top menu item. That wouldbe item-140 under the first menu item option (Performance/Numbers).

I would like that item to use the br and hover images;

aircraft_menu_bottom_top_bg.png
aircraft_menu_over_bottom_top_bg.png

How would I do that?

Thanks,

_____

1. Add the following CSS rules to remove shadow:

#ariyui110 .yui-menu-shadow
{
 display: none !important;
}

body #ariyui110.yui-skin-sam UL LI A.yuimenuitemlabel
{
 width: 180px;
}

2. You can use FireBug addon for FireFox extension to investigate menu styles and HTML layout and add rounded corners.

_____

Thanks!

That worked. I have used Firebug to try and find the source of the grey (#808080) bg color that appears on hover - http://216.119.72.72/index.php/performance.

I can't seem to find what rule is drving this.

?

_____

See CSS rules for ".yuimenuitemlabel-selected", "yuimenuitem-selected", "yuimenubaritemlabel-selected" and "yuimenubaritem-selected" elements.

Re:Submenu CSS

Posted by vicmorgie - 2012/09/14 17:01

_____

This is the rule I am using in the module.

#ariyui110.yui-skin-sam UL LI A.yuimenuitemlabel:hover {
 background: transparent url('/images/aircraft_menu_over_bottom_bg.png') no-repeat !important;
 border-style: none !important;

}

It works to set the bg on rollover but there is still a bg color appearing behind it. If they are driven by the same rule, how can this be?

Thanks,

_____

Sorry to keep this string going but I am at a loss.

I have used Firebug and can't figure this out.

http://216.119.72.72/index.php/performance

There seems to be a hover rule that is displaying underneath my bg graphic. The color displaying is #808080. I went through all the css files and could only find a referrence to that color relating to borders. I removed them all anyway, nothing.

Then I added this rule to another instance of this ARI YUI menu:

#ariyui130.yui-skin-sam UL LI A.yuimenuitemlabel:hover
{
 background-color: #FFFFFF;
}

That changed the color in question for that menu but the same rule applied to the 110 instance of the menu would not.

I am stumped.
