Unique Submenu Width Issue

Posted by keith@designrule.co.uk - 2012/10/24 07:50

_____

Hello,

It may have been discussed in another thread, but for the life of me I cannot find it.

The problem I am having is concerned with setting an individual or unique width for each of my submenus, or at least an automatic setting that reflects the li content. At present all I seem to change is the first-of-type settings. Is there a way of defining a unique menu id reference for each submenu?

This problem may stem from the way I have have crated the submenu structure. As I am relatively new at this, it is a distinct possibility!

My site reference is: http://79.170.44.93/designrule.co.uk/

Any help would be greatly appreciated.

_____

Hello,

Use the following CSS rule:

.yuimenuitem-itemPARENT_ITEM_ID UL
{
 width: 150px !important;
}

Where PARENT_ITEM_ID is ID of parent menu item. For example if parent menu item Id is 207, use the following CSS rule:

.yuimenuitem-item207 UL
{
 width: 150px !important;
}

Regards,
ARI Soft
