
Can't get it working

Posted by kolinus - 2010/04/24 22:16

Hi,
thank you for the control -- it looks amazing at your demo server.

But actually I can't get it working.

What I have done -- just installed it to joomla and pointed my menu to use it for display.

The menu is showh but all the children are expanded.

So my question is -- do I have to add all the stuff (javascript libraries and caals) to my template or should it be don eautomatically and I have to check the setting of the server.

Thank you in advance.

Regards.

Hello,

Could you provide link where we can see this issue?

Regards,
ARI Soft

Unfortunately not, as it's on my local computer. I can send the generated output if it helps. Thank you in advance.

Hi ,
my issue was that I haven't included Joomla header into the template. After including it everything worked just fine.

Regards.

Nevermind, I figured it out. Now, is there a way to control the look and feel of the menu? Thanks

Hello,

Does it work now?

PS: About menu styles you can read [here](#).
