## Transparent background (and some more)

Posted by autje - 2010/04/25 11:56

---

First of all: great looking menu. But I still have a few questions.

I'm trying to emulate the menu at <http://icsfilm.org>, and get as close to it as possible.

First question: is it possible to have the background image shining through like on that site, and if so, how do I do that in the CSS?

Second question: I've found how to create the line underneath each menuitem through

```
.yuimenuitem{  
  border-bottom: solid 1px #2D2D2D;  
}
```

but it doesn't pick up the color. Also, when I add font-size or padding to that, nothing happens. How do I change them so it looks like on that site?

Third question: how do I get rid of the outside border of the menu?

I've looked at the CSS reference, but it is quite confusing for someone with very little CSS knowledge like myself :blush:

Figured out questions two and three myself (hooray for Firebug!), but question one remains.

I'm getting closer and closer :). I basically have everything the way I wanted, except I lost my submenu-indicator. I would think this:

```
{ $id }.yui-skin-sam .yuimenu .bd UL LI.yuimenuitem-hassubmenu {  
  background-image: url(js/build/menu/assets/skins/sam/menuitem_submenuindicator.png);  
  background-position: right center;  
  background-repeat: no-repeat;  
}
```

would work, but unfortunately not. Any suggestions?

I also notice that the active menu is always in the 'active' color, even if the mouse isn't over the menu. Not a real problem, but is there a way to change that?

ETA: literally a minute after posting I found it. The above should have been:

```
{ $id }.yui-skin-sam .yuimenu .bd UL LI A.yuimenuitemlabel-hassubmenu {
```

Once you figure the CSS out, this really is a thing of beauty :).

Hello,

Sorry for delay, all information about menu styles you can find here, it's described in this post.
