Problem with dropdowns in IE7

Posted by vollachr - 2010/05/17 09:55

_____

Hi,

I recently installed the ARI YUI Menu on my website, it works great, as long as I display the website in Firefox or Internet Explorer 8, when the website is displayed in Internet Explorer 7 or even in IE8 with Compatibility view set to on the dropdowns from the ARI menu do not open bellow the parrent menu but instead they open up way to the left making it impossible to access the submenu item before the menu closes.

I need help fixing this please.

A little extra info:

Website is in Hebrew, meaning the menu as well so it is RTL direction and of course I use the menu as horizontal menu at the top of my website.

Website address: http://www.sr-computers.co.il

Joomla version: 1.5.17

Thank you.

Hello,

Try to add the following CSS rules to template CSS file:

.yuimenu {
  right: 0;
}

.yuimenubaritem-hassubmenu {
  position: relative;
}

Regards,
ARI Soft

_____

Open 'Extensions->Template Manager' page on your Joomla! backend, click by active template, click 'Edit CSS' button, choose 'template_css.css' file for editing, add CSS rules which we provided before and save CSS file.

Regards,
ARI Soft

OK, thank you, I thought that what you meant, just wasn't sure.

Did what you said and it seem to have done the trick, I just checked it on IE7 and it was OK and it still works fine on Firefox and IE8 as well.

I appreciate your help.
