
Change location submenu.

Posted by fabrisc - 2013/07/24 23:48

Hi, how can I align the sub menu to the first item of the main menu?
This is my under construction site: <http://www.vajana.it/sito/>

Thanks for the support

Hello,

Top left corner of sub-menu contains is aligned with right top corner of parent menu item. Sub-menu contains contains navigation arrows and menu item. You have changed menu styles so all space which is occupied by sub-menu container is not shown.

Try to add the following CSS rule:

```
body .yui-skin-sam .yuimenu ul
{
padding-top: 0;
}
```

I tried adding the code but the shift occurs for the whole menu including the main one. I would like to move only the submenus. thanks

Try the following one:

```
body .yui-skin-sam .yuimenu ul ul
{
padding-top: 0;
}
```

I tried the code but does not function. I also restored the original files before inserting css code. Any other suggestions to align the submenu at the top menÃ¹? If necessary I can post admin access in private. thanks so much

Sub-menus are aligned to parent menu items. If you want to change this behavior, it requires modification of the extension. You can find information about menu HTML layout and CSS classes here, it can be helpful if you want to modify the module.
