Multiple Menus Sure... Different CSS for each????

Posted by Josephi - 2010/05/22 05:22

_____

I've got 3 menus on my site, 1 horizontal and 2 vertical.
Each has a different width.
I set the CSS in safe_menu.css for the width of the menu items in the horizontal to be uniform using the css on lines 153 and 175.

Now, it overrides the vertical menu width.

How can I have a horiz width of 83, a vert width of 163 and 173?

Hello,

We have updated the module. Now it contains new parameter 'CSS Styles' which helps override menu styles or add new styles. You can use {$id} predefined variable which will be replaced with id of menu container. In you case, you can download updated version, upgdate it on your site and place the following CSS rule in 'CSS Styles' parameter:

#{$id} ul li.yuimenubaritem {
width: 83px; /* 163px or 173px */
}

Regards,
ARI Soft
