## Placing the menu in the footer opening upwards

Posted by Phixon - 2010/05/25 20:44

---

Hello!

Loving the look of this menu. I was wondering if anyone knew how to make this menus drop down go up instead of down.

I want it in my footer, and instead of the sub pages dropping down, id like them to go up. Anyone know if this is at all possible. If not, an extension that does?

Thanks!

Hello,

The module shows menu below menubar if it has enough space. In another case, it will show menu above menubar.

Thanks for the speedy response.

There is enough space at the bottom, but i want to keep that space empty. If there a way to force it up?

Thanks again

We have updated the module. Download and upgrade it, please. New version contains new parameter 'Submenu alignment', set this parameter to 'bl,tl' that display submenus above menubar.

Thank you very much!

As far as I am aware your menu extension is the only one that can do this without big changes to the code/css

Very impressed with the speed of support on your free products.

Leaving 5 star review on the joomla site now!
