## menu hides/dissapear behind the banner graphics...

Posted by mejor.com - 2013/12/18 03:37

---

Hello,

I am working on this site:

<http://anestesiaregionalargentina.com/gear4/>

I was not able to make it work correctly at the "menu" position so I had to display it on a different module location "Top A" according to my Template layout naming, since I was not showing the Home button.

at the TOP A location:

The menu drop down submenu content hides behind the gallery/banner right under.

Is there a way that it can remain over the banner?

Thank you very much.

Regards,

Paul.

Hello,

How to reproduce the problem?

Hello,

Sorry, I was trying a work around moving the modules to different positions so as to have the menu working.

I have place the menu + banner + twitter bubbles where my client wants them for you to see.

- menu: at Top A position since when in menu it's blank.

- banner: Top B

- Twitter bubble: Main Top position.

<http://anestesiaregionalargentina.com/gear4/>

thank you.

---

Add the following CSS rules to fix the problem:

```
.tm-top-a
{
  z-index: 2;
  position: relative;
}
```

```
.tm-top-b
{
  z-index: 1;
  position: relative;
}
```

Thank you very much!

added this code to safe\_menu.css

and it fixed the problem!!

now the menu is over the rotating banner.

-----

as I show on the graphic... when I place your menu module at the position: "menu" the bar is empty.

but, gather I will leave your module menu at top a for now.

again, appreciated.

It seems not enough space in "menu" position.
