
Module Class Suffix?

Posted by rowby - 2010/06/10 01:03

Looks like this is another winner Ari-soft extension.

I am wondering if there was any reason there is not a "Module Class Suffix" field in the module, so I can do some precise div positioning via css.

Or is this handled some other way in the module???

In any case, here is a version of the module I am working on on a test development site. I am trying to get the module to align left:

<http://freevanrentals.com/>

Any suggestions?

Thanks!

Hello,

You can type the following code in 'CSS Styles' textarea in module settings:

```
#{ $id } .yuimenu ul
{
  position: relative;
  left: -220px;
  display: inline-block;
}
```

```
#{ $id } .yuimenu .yuimenu ul
{
  left:0;
}
```

Thanks for that tip.

For another site, I also need to make the menu be approx 40pixels tall. I tried adding the height code to the css from you post (40 px) but it isn't working so I guess I did not do it correctly. :)

Here's the site: <http://brentwoodvillagemarket.com>

Where in the below code can I make that modification?

```
#{ $id } .yuimenu ul
{
```

```
position: relative;
left: 0px;
display: inline-block;
height: 40px;
}
```

```
#{ $id } .yuimenubar .yuimenu ul
{
  left:0;
}
```

Hello,

Add the following CSS rules to 'CSS Styles' parameter:

```
body #s5_breadcrumb div.moduletable
{
  padding-top: 0;
}
```

```
body #{ $id }.yui-skin-sam .yuimenubarnav .yuimenubaritem
{
  height: 40px;
}
```

```
body #{ $id }.yui-skin-sam ul li a.yuimenubaritemlabel,
body #{ $id }.yui-skin-sam ul li a.yuimenubaritemlabel:link,
body #{ $id }.yui-skin-sam ul li a.yuimenubaritemlabel:visited,
body #{ $id }.yui-skin-sam ul li a.yuimenubaritemlabel:hover
{
  height: 40px;
  padding-top: 8px;
}
```

Regards,
ARI Soft
