## Separators would not show

Posted by norstar - 2010/06/10 08:05

---

In my main menu I had some separators between the menu items, but with Ari Yui Menu, they don't show. How can I get the separators to show? All I can figure out is how to change the separator line that is between the menu items in a horizontal menu.

Hello,

Provide link to page, please, where we can see this issue and screenshot of your menu items.

Regards,

Can I send the site address in an e-mail?

I've attached a screenshot of the menuitems in backend. [http://www.ari-soft.com/images/fbfiles/images/Bilde\\_1.png](http://www.ari-soft.com/images/fbfiles/images/Bilde_1.png)

If you want to display ':' between menu items then the module doesn't provide this possibility. The extension uses 'Separator' menu item type that adds separator line for sub-menus items. You can see what we mean on our demo site, see 'ARI Quiz' sub-menu in 'ARI YUI Menu module with horizontal direction' menu. You can see line between 'Quiz Statistics' and 'Quiz in article' menu items.
