## Drop-Down Menu behind the template components

Posted by Afrikao - 2010/06/11 18:49

---

Dear Ari YUI Soft team,

just today I've purchased Your ARI Smart Content and, also, I would like to say You BIG thanks for Your ARI YUI Extended menu.

Your latest version is really EXCELLENT saving the original style of the original templates and auto-width !

Hopefully You could resolve my problem and reply my questions.

### PROBLEM 1

Please, see my test website AFRIKAO

Under ANY browser I see that drop-down menu is hiding under the components.  
I suppose You can see the same.

I'm not big specialist with CSS hacking - and I use "COOLNESS" template from Community Builder (platform Joomla 1.5.17)  
demo on COOLNESS

If it needs - I could send You it's native template\_css.css  
Just say me - publish on forum or send to an email.

Also, let me ask You

### Question

Are there any EXAMPLES how to use ARI-PROCESS-CONTENT what "to process mambot (plugin) tags everywhere" ?  
(how it did for any component of ARI-SMART ?)

Waiting for Your reply,  
Best regards,

=====

Hello,

We have send CSS rules which help fix issue with menu by email. Regarding the second questions, if you want to use 'ARI Smart Content' plugins in any content, you can download and install 'ARI Smart Content Anywhere' plugin. This plugin is available for download on this page see F.A.Q. tab. Download, install and enable this plugin and disable 'ARI Smart Content' content Joomla! plugin.

Regards,  
ARI Soft
