
Changing or removing separator /Width of menu item

Posted by mana78 - 2010/06/19 16:48

Hello to everybody

First i want to say thank you for that great menu module. I really like it. Because I am also a little bit new to css and all that stuff I am trying hard at the moment how to remove the separators between the different menu items, or to change it to another graphic.

Also I have question concerning the width of the menu items and the different levels.

Is it possible to fix the width for the first level and keep the submenus flexibel in width?

I hope somebody can help me.

Thank you in advance and best regards.

Peter

Hello,

Regarding your questions, you can use the following CSS rule that define width for first level menu items:

```
.yuimenuubar .bd UL LI a
{
    width: 150px; /* specify necessary width */
}
```

```
.yuimenuubar .bd UL LI .bd UL LI a
{
    width: auto;
}
```

and you can type the following CSS rules in 'CSS Styles' module parameter that remove separators:

```
body #{$id}.yui-skin-sam .yuimenuubarnav .yuimenuubaritem
{
    border-right-style: none;
}
```

Regards,
ARI Soft

Thank you very much for your help.

Really a great module.

Regards.
Peter
