Every submenu lost decoration when rt_afterburner
Posted by Hottentot - 2010/06/21 17:43

_____

Hello everybody! I decide to use this nice module for my site, but my template is Afterburner (free template from rockettheme) and somehow it ruins decoration of any submenus! I tested this with standart templates and everything was right. I found not specific css styles or js and jdoc-head is standart and right. Any ideas? Url - http://a-garage.ru

_____

Hello,

This problem with your template CSS styles. Add the following CSS rules to 'CSS Styles' parameter in module settings:

```
#{$id} .bd UL LI UL
{
 width: auto;
  position: relative;
}
```

```
#{$id} .bd UL LI UL
{
 width: auto;
}
```

Regards,
ARI Soft

_____

Thank you, it helped! :)
Another question: how can i fix padding for text and selected object?

_____

Sorry, a mistake in the previous code. It should look like:

```
#{$id} .bd UL LI UL
{
 width: auto;
  position: relative;
}
```

```
#{$id} .bd UL LI UL LI
{
 width: auto;
}
```

Regards,
ARI Soft

_____

It helped with any text :) , but this selected blue line still moved right.

_____

Try to add the following to "#{$id} .bd UL LI UL LI" CSS rule:

margin-right: 8px;

or the following if you want to fill all available space in sub-menu with blue line:

margin: 0 -8px;

Regards,
ARI Soft

_____

Thanks, your first tip helped.
All available space in sub-menu is so much for nice blue line :)
Thank you for your help. It's great support for non-commercial extension.
