
Need different main and dropdown colors

Posted by Jerard - 2014/09/16 17:56

Hello,

I have a couple of questions regarding my site at: AskJeff.US.

1) It seems that the same code that causes the main menu text to be a specific color also cause the dropdown hover color to match. What I mean is that the menu items "Life Insurance", "Dental Plans", etc. are orange and the dropdown color (when hovered) is also orange. What I'd like to do is have the main menu color to be light green with the dropdown hover color to remain orange. Is there a change I can make to the existing code or would this require a new line of code? I would like the top menu to also match the main menu?

2) As you can see, I have 2 YUI menus on my site. I have been copying the code from the main menu ("Life Insurance", etc) to the Top menu. This sometimes seems like it causes a conflict. Is there a way to code each one differently so as to not effect the other?

Thank you.

=====

Hello,

You can find information about menu HTML layout and CSS classes in this post. BTW, you can use "ARI Ext Menu" instead of "ARI YUI Menu". "ARI Ext Menu" support ability to define color, bg color and other parameters for main and sub-menu items separately.

Yes, the Ext menu works better for me. I have centered the menu but how do I make the entire menu's width be 100%?

Thanks you

It is possible to set width of menu items separately. Read more about it here.
