
Changes in the css

Posted by ncds - 2010/07/13 19:48

Development link

<http://aranasteel.maxoid.com.au/>

Have to say firstly thats its great to see a class menu for Joomla..Install and setup worked easily.

I was going to ask why none of the "CSS styles box" overrides worked, but I changed "Safe mode" to no... and it all worked.

So the last on on the list is -

How can I shorten the overall lenght of the menu..currently it extends over the entire column, with a large blank area on the right hand side.

What does the menu container width do??

Do I need to split the row to limit the lenght??

Hello,

You can use the following CSS rule in 'CSS Styles' parameter:

```
#{ $id }
{
    width: 635px;
}
```

Regards,
ARI Soft
