
Valid xhtml

Posted by nick - 2010/07/27 08:49

Thanks for a great component!
I was wondering how I can get it to produce valid xhtml and css?
<http://planetenuppsala.se/>

Thank you

Thanks, I installed the modified module you mailed but it did not change the validation errors.
Any other tip?

Downloaded modul and installed but still 15 errors. Extension manager says 1.0.13, correct version?

We only see one error is related to 'ARI YUI Menu' module from this 15 errors. This is the first error:

'Line 32, Column 9: required attribute "type" not specified'

We have fixed it. Download and upgrade module again, please. Other errors aren't 'ARI YUI Menu' module errors. Report contains information about in what line and column errors occur. You can open HTML source of the page and find incorrect HTML code.
