
Changing font style, color

Posted by azerty123465 - 2010/07/28 03:08

Hello,

I would like to know the css code to modify in order to choose the font style and make it bold.

Also, can point out the class I need to modify to change the sub items links style (color, font style, bold, etc...)

Thank you.

Hello,

You can set font weight and font size in module settings. Currently the module provide possibility to set it the same for main and sub menu items.

Regards,
