Modifying the SQL Query to add another requirement

Posted by l.landeche - 2010/08/11 21:54
_____

basically we have modified our version of joomla so we can put multiple sub menu items but only show them if we want them shown..

Basically i may have

Music
--Bands
--Concerts
--Resources

so in the params of each menu iteam we have a field

To Show On Submenu it would be this
noc_sub_menu_display=1

Do Not Show on Submenu it would be this
noc_sub_menu_display=0

and my previous custom menu we had the query include that

ex. SELECT id, name, link, type, sublevel FROM jos_menu
    WHERE published = 1 AND params like \"%noc_sub_menu_display=1%\"
    AND parent = '$parent_id' ORDER BY ordering LIMIT 0, $item_limit"

it works great right now but we really want to use this menu now we like the style and functionality of it we really just need to get what is bolded added to the query i did some punking around and found in the class.MenuHelper.php file that there is a query i tried to at params like \%noc_sub_menu_display=1%\ to line 27 of the code " ' WHERE menutype = %s AND published = 1 AND access < %d%s' ." but it would it would just break the menu.. does anyone have any clue how i can get this to work?

Thanks,
Leigh

Hello,

Send you modified class.MenuHelper.php file by email, please.

Regards,
ARI Soft
