
Line after each item?

Posted by pepperpilot - 2010/08/29 01:44

Hello I have cleaned up the navi bar but for some reason I still get a line at the end of each item. Is there a way to remove it?

Also, can I create a border around the whole box including the title just like the other ones on my site that are below the ari yui menu?

thanks

Hello,

1. Set 'Menu direction' parameter to 'Vertical' in module settings.
2. Set 'Module Class Suffix' parameter to '_menu'.

Thank you, Thank you so much that work excellent.

Do you know how to add a little image of something to the front of the selections? I used to have a little tiny chile pepper in front of the selections, but even a dot would be cool. thanks

What is the code to change the color for the selection from the baby blue to say forest green?

thanks again. your awesome.

You are welcome. Regarding questions:

1. Add the following CSS rule to 'CSS Styles' parameter in module settings:

```
body #{$id} .yuimenu .bd ul li.yuimenuitem-selected
{
    background-color: green;
}
```

2. Could you say link to image with red pepper?

Add the following CSS rule at the top of safe_menu.css file:

```
{ $id } .yuimenu .bd UL LI.yuimenuitem A.yuimenuitemlabel
{
    background: transparent url(/store/images/chili2.gif) no-repeat 2px center;
    padding-left: 40px !important;
}
```
