
Submenu appears on the center (rtl)

Posted by Elesar - 2010/08/30 12:44

Hello,

First I'd like to say this is a great module, exactly what I had in mind when I started looking for a new menu looks.

The problem is this:

I use a Ja_Purity based template, and the website has two languages (using JoomFish). While the English version works great, I've been having issues with the Hebrew translation (rtl). The vertical ARI YUI menu opens in the center of the screen instead of appearing right next to the parent menu. I suppose I need to enter some rules in the template css?

The website cannot be accessed from the internet yet, but I have found a similar issue on another website:

http://www.yairl.com/jorgil/index.php?template=ja_purity&option=com_content&view=article&id=51%3A%D7%AA%D7%A4%D7%A8%D7%99%D7%98-ARI&Itemid=78

I hope this is enough.

Cheers!

=====

Hello,

Add the next CSS rule to 'CSS Styles' parameter on module settings page:

```
body #{$id}.yui-skin-sam .yuimenu UL LI.yuimenuitem
{
    position: relative;
}
```

```
body #{$id}.yui-skin-sam .yuimenu .yuimenu
{
    right: 100%;
}
```

Regards,
ARI Soft

Thank you for the quick reply.

It seem to have done the trick, but had also caused a new issue. The submenu seem to open, but it's properly visible. I can see what seem to be the edge of the submenu opens up to the left (which is the correct side when talking about RTL), but the rest of the submenu seem to be 'hidden' behind the main article.

See attached image

http://www.ari-soft.com/images/fbfiles/images/ARIYUI_issue.png

This happens in English as well, only it opens on the right side, as should be in LTR.

Cheers!

Hi again,

Okay, got it online.

Here's the link:

<http://www.controtec-ltd.com/index.php?lang=he>

That's when I deleted the CSS rule on the module settings, so this is the 'original' issue. If required I can re-enter it off course,

Cheers!

Hello,

Add the next CSS rule:

```
body #ja-col1
{
  overflow: visible;
}
```

Regards,
ARI Soft

It works properly now.

Thank you very much! :)

EDIT:

English version has some weird issue now :\

After editing the style CSS, the submenu background doesn't show on the English version (though the Hebrew version works properly).

www.controtec-ltd.com/index.php?lang=en

Any idea if that can be solved?

Add CSS rules for Hebrew version to `/modules/mod_ariyuimenu/mod_ariyuimenu/js/assets/menu/sam/safe_menu_rtl.css` file and remove it from 'CSS Styles' parameter.

Okay, sorry. I thought it was suppose to go to the style CSS.

Works good now, both versions.

Again, thank you very much for your great help! :)
