Submenu display issue
Posted by mbrown - 2010/09/13 15:47

I'm having an issue with the submenu items displaying properly. They are being displayed behind other modules and site content. Can you help resolve this issue? I have looked at other posts and tried a few things but can't get anything to work. Here is the site. http://ownersperspective.org/ I'm not sure if I'm editing the right CSS file. Any help is appreciated.

Hello,

Add the next CSS rules:

```
#art-main .art-Block
{
 z-index: 2;
}

#art-main .art-contentLayout
{
 z-index: 1;
}
```

Regards,
ARI Soft
