
Need help with aligning menu bar

Posted by stormfire - 2010/09/16 03:45

<http://dev.level9solutions.net/>

On the above web site, I need to move the menu further down on the web page (approx 125 px down from the top) on the same line as quick search but further right.

Look at this web site to see where the menu is located.

level9solutions.info

Appreciate your help

Hello,

Try to add the following code to 'CSS Styles' parameter in module settings:

```
#{ $id }
{
  position: relative;
  top: 4px;
}
```

Regards,
ARI Soft

Thanks.
also take a look again.

I need to increase the font size to 16px
remove the background image ,
change the font color to white
and want to make it flush to the right side

using firefug, it shows me:

```
#ariyuimenu_ariyui363 a {
font-size:13px !important;
font-weight:bold !important;
text-transform:capitalize !important;
```

Changing this fixes the issues, but I cannot find this css. perhaps there is a better way

Thanks again

Font size can be set in module settings. See 'Font size' parameter. The CSS code is located in the next file:

/modules/mod_ariyuimenu/mod_ariyuimenu/templates/main.html.php

See lines #74 - 79. More about menu styles you can read in this post.

Regards,
ARI Soft
