
Position Problem in IE7 with horizontal Menu

Posted by Ghnaarz - 2010/10/12 14:51

Hello,

I have a serious Problem in IE7. If you look at my Website www.curadomizil.ch in Firefox you can see how it is supposed to look and everything works fine, but in IE7 the whole Menu is messed up. The positions are not correct and it just looks awful. What can I do to fix these positions. I have to do something soon, because this site is online and way to many people use IE7 =).

Thank you very much for your reply. I hope you can help as good as last time.

PS. I know this is an Issue of IE7 and not your Module. It works absolutely perfect apart from that.

Hello,

Try to remove all custom CSS rules which you added and use the following CSS rules:

```
BODY #ariyui19 .yui-menu-shadow
{
  visibility: hidden;
}
```

```
BODY #ariyui19.yui-skin-sam .yuimenu .bd
{
  background-color: #F3E197;
  width: 131px;
}
```

```
BODY DIV.yui-skin-sam ul
{
  padding-left: 0;
  margin-left: 30px;
}
```

```
BODY DIV.yui-skin-sam {
  position: relative;
  width: 100% !important;
}
```

```
body .yui-skin-sam .yuimenubarnav .yuimenubaritem
{
  width: 131px;
  height: 32px;
}
```

```
body #navigation DIV.yui-skin-sam .yuimenu .bd
{
  border-style:none;
}
```

```
body #navigation DIV.yui-skin-sam .yuimenu ul li
{
  border: 1px solid gray;
  margin: 4px 0;
}
```

```
body #navigation .yuimenuBarItem
{
    margin-left: 7px;
    margin-top: 16px;
    *margin-top: 6px;
}
```

Regards,
ARI Soft

Hi

thanks for your reply, but I'm afraid it didn't help. Now it's broken in IE7 and FF. =)

Hm... Sorry, but IE7 is still messed up and FF isn't entirely correct. In FF the menu has moved down a few pixels so there is an orange margin that didn't used to be there and the dropdown has a yellow margin on top. It is about 5-10px.

In IE7 the buttons aren't in the right place. They are about 5-10px too far left and there are no margins between the buttons.

Now the menu should work in FireFox and IE 8. It also works in IE 8 in IE 7 emulation mode. It has problem with main menu items in native IE 7, menu items are shifted to left. We suppose it's a problem with site template. It can be investigated with help IE DevToolbar extension for IE browser. Information about menu styles can be found in this post.

Re:Position Problem in IE7 with horizontal Menu

Posted by Ghnaarz - 2010/10/13 14:42

Thank you for your help. I managed to move the buttons to the right positions in IE7 using the following codes:

```
*+html body #navigation .yuimenubaritem { /*IE7 only*/
    margin-right: 7px;
}

*+html body DIV.yui-skin-sam { /*IE7 only*/
    margin-left: -55px;
}
```

Now I only have two small problems left.

1. The last item called «intern» is mysteriously moved down a row.
 2. The Arrow for the dropdown Menu is on the wrong place. But thats not a big problem.

Ok, I did it!

I just had to increase the width of the whole menu and then update the margins for Firefox (and the seperate ones for IE7 I mentioned in the post above. I'm pretty sure it should work in every Browser.

It was a nasty piece of work, but I am so glad now. I think it could have been a combination of my self-programmed template and IE7. Mainly IE7 imho though.

But the most important thing is: It works, and I still think this is a great module. Thank you for your support. Support is excellent here!

If I ever come across an other problem and need your help, I want you to give me a opportunity to donate.
