
Menu not visible

Posted by imbogdan - 2011/02/14 08:22

Hi,

I've installed ARI Ext Menu on my site but I can't use it. I use the Beez2 - Default template on Joomla 1.6 and if I set the menu on Position-1 (menu on top of the banner) the menu is not visible. If I set the build-in menu on the same position everything is OK.

Any ideas?

<http://www.swtesting.ro/>

Thanks,
Bogdan

Hello,

Provide screenshot(s) of module settings page by email please.

Regards,
ARI Soft

Posted by admin - 2011/02/14 11:13

This is a problem with site template styles. You can try to add the following CSS rules that fix it:

```
body #header
{
    overflow: visible;
}
#header ul.ux-menu li a:link,
#header ul.ux-menu li a:visited
{
    display: block;
    padding: 10px 14px;
}

#header ul.ux-menu li a.ux-menu-link-parent:link,
#header ul.ux-menu li a.ux-menu-link-parent:visited
{
    display: block;
    padding: 10px 24px 10px 14px;
}
```

```
#header .ux-menu ul.ux-menu-hidden
{
display: none;
}
```

```
#header ul.ux-menu
{
right: 0;
margin: 0;
padding: 0;
top: 0;
position: relative;
}
```

```
#header ul.ux-menu-sub li
{
text-align: left;
}
```

```
#header .ux-menu-container ul
{
max-width: none;
padding: 0;
margin: 0;
}
```

ARI Soft

Re:Menu not visible

Posted by imbogdan - 2011/02/14 11:55

Thanks for your help. I have only one question. How can I place the menu on top of the banner not below? (like the original menu)

Re:Menu not visible

Posted by admin - 2011/02/14 12:02

Use the next CSS rule:

```
#header .ux-menu-container
{
position: absolute;
top: 68px;
left: 10px;
}
```

Regards,
ARI Soft

Re:Menu not visible

Posted by imbogdan - 2011/02/14 12:05

Thanks, now it's perfect. I've never received better support. You're great. Thanks a lot.

This is the same problem I'm having, can you please tell me where I should insert the above rules? There are an awful lot of different ones in Beez2. is it the main page template or one of the other stylesheets? and do you just insert it at the end or somewhere else?

Sorry, this will be the first time I've done this.

Re:Menu not visible

Posted by admin - 2011/03/18 22:22

Hello,

Add custom CSS rules to site template CSS file or to "CSS Styles" parameter in module settings.

Regards,
ARI Soft

ARI Soft

Re:Menu not visible

Posted by curt - 2011/06/27 16:19

I'm using the beez_20 template that came with Joomla!1.6. I added the above CSS code to the template.css file for beez_20, but it didn't affect the Ari Ext Menu. I added the above CSS code to the position.css file for beez_20, and it did change the menu.

Am I correct to assume that position.css is the right file to put this CSS into?

Re:Menu not visible

Posted by admin - 2011/06/27 19:22

You can add custom CSS rules to "CSS Styles" parameter in module settings or to any CSS file which is loaded by site template.

Regards,
ARI Soft

Re:Menu not visible

Posted by The Original - 2011/12/06 23:31

Hi,

I'm currently running Joomla 1.6.6 and am preparing to update the system to 1.7.3. I thought that it would be a good idea to update ARI Ext Menu before updating Joomla. However, when i did install the latest version of ARI Ext Menu my menu completely disappeared. I tried to use the CSS posted in this thread but i doesn't seem to be the solution to my problem. Here is a link to my site. Any ideas?

Re:Menu not visible

Posted by admin - 2011/12/07 07:35

Hello,

"ARI Ext Menu" on provided page doesn't contain menu items so it shows nothing. It seems the module is configured incorrectly. We can investigate this issue in more details if you provide temporary access to your J! backend by email.

Regards,
ARI Soft

Re:Menu not visible

Posted by Hootroo - 2013/02/09 03:56

I am wondering why the menu doesn't go across the whole screen as well. My site is at <http://potofgoldideas.com/> , I only have 1 menu item at the moment but would still want the menu bar to go 100% across page.
The only css I have added into module params is

```
body #ariext117
```

```
{  
  width: 100%;  
}
```

before that it only showed the little "home" box on the right.

Re:Menu not visible

Posted by Hootroo - 2013/02/10 00:28

Thanks for the fast reply. I have seen that post but I am actually trying to find out if you can have a menu (for example) with only 3 menu items (which don't fill the width of the page, but still have the menu fill 100% width of the page...like the menu at the top of this page here ^^).

Re:Menu not visible

Posted by Coccinelly - 2015/02/14 09:34

Hi,
When I put the menu on the top of the banner, we can't see the bottom of the submenus (the submenus stops at the end of the banner).
You can see that on the site

Thank you for your help

Re:Menu not visible

Posted by admin - 2015/02/14 11:22

Hello,

This problem with site template styles. Add the following CSS rule to fix it:

```
BODY #header {overflow:visible;}
```

Regards,
ARI Soft

Re:Menu not visible

Posted by Coccinelly - 2015/02/14 11:50

I have already put this in the position.css
but it does not work
Perhaps should I put that in another place?

=====

Re:Menu not visible

Posted by admin - 2015/02/14 11:53

We see only #header {overflow:visible;} CSS rule in position.css file, it doesn't contain BODY #header {overflow:visible;} CSS rule. BTW, custom CSS rules can be added to "CSS Styles" parameter in module settings.

Regards,
ARI Soft

Re:Menu not visible

Posted by Coccinelly - 2015/02/14 12:03

it s ok
Thank you very much
Just a little question :
how to make the menu is not transparent when moving the mouse over it?

=====

Re:Menu not visible

Posted by admin - 2015/02/14 12:36

Add the following CSS rule:

```
UL.ux-menu LI A {background-color: #195a60 !important;}
```

Regards,
ARI Soft

Re:Menu not visible

Posted by Coccinelly - 2015/02/14 14:16

it's almost perfect... I wish the first level is transparent
and the submenus not transparent.
Is it possible ?
thank you very much
