Validation errors in CSS+HTML due to ARI EXT Menu

Posted by Anne M - 2010/05/20 23:10

Hi,

First of all: I think that this extenion is fabulous.

However, I checked with validation service and received many many errors in CSS and HTML.

Unknown: "zoom" in CSS in ext-border-box .ux-menu-ie-iframe, .ext-ie7 .ux-menu-ie-iframe
and in .ext-ie .ux-menu-clearfix
Parse error: mask() in CSS in .ext-border-box .ux-menu-ie-iframe, .ext-ie7 .ux-menu-ie-iframe

Did you every heard this?

Hello,

Thanks for your report, we have fixed this issue. Download new version of the module and upgrade it, please.

Regards,
ARI Soft

Yes, thank you. I did.
Can I just upload the new version or should I get rid of the old version before uploading the new version?
Gr,
Anne

Open 'Extensions -> Install/Uninstall' page on Joomla! backend and install the module, upgrade process doesn't require to remove the previous version. Installer upgrades old version of the extension to new version automatically.

Thx, I know the answer now. Just install as usual. And done.

No more errors in CSS Validation. Wel done! and you are quick.

Thank you!
Best Regards,
Anne

Hi,

CSS error are repaired now.

However, still HTML validation errors due to wrong use of ampersand?

W3C validation service says:
This is generally the sign of an ampersand that was not properly escaped for inclusion in an attribute, in a href for example. You will need to escape all instances of '&' into '&'.
I can see in the reports
Beginpagina

I do not exactly understand since this is the URL which I can see in my browsers (Opera, FF and IE7)

Your module is working just fine in all 3 browsers. But I would like to see a correct validation for my website. Is there a PHP in your module which makes the translation of '&' into '&' not correctly?
in 'class.JoomlaUtils.php in between line 88 to 112 I discovered:

```
function getLink($link, $xhtml = false, $clearItemId = true)
 {
  if (!AriJoomlaUtils::isJoomla15())
  {
   if (function_exists('sefRelToAbs')) $link = sefRelToAbs($link);
   if (!$xhtml) $link = str_replace('&', '&', $link);
  }
  else
  {
   $app = &JFactory::getApplication();
   $router = &$app->getRouter();

   if($router->getMode() == JROUTER_MODE_SEF && $clearItemId)
   {
    $itemidPos = strpos($link, 'Itemid');
    if ($itemidPos !== false)
    {
     $link = preg_replace('/Itemid(?:=*)?/', '', $link);
    }
   }

   $link = JRoute::_($link, $xhtml);
  }

  return $link;
 }
```

I am using Joomla without SEF URL. If I can read PHP the read line should give '&' instead of '&'.

What is going wrong here?

Best Regards,
Anne

Hello,

Download updated version of the extension and re-install it, please. If problem still appears, provide link to your page, please, where we can see this issue.

Regards,
ARI Soft

Thank you very much!

I appreciate your work and support. I like you module very much!

And yes, I will now give an excellent review at extensions.joomla.org since your product is excellent and your support is excellent.

Best Regards,
Anne
