
Install and use ARI Ext Menu two times

Posted by joesiet - 2014/02/01 12:18

Hello,
is it possible to use the ARI Ext Menu 2 times on 1 joomla-3-website with different css styles?
I want to configure 2 differnt looking menuues, like main-menue and footer-menue.
I've tried: I've duplicated the Ext-module but it seems that the copied one falls back on the same css-styles.
Can I individudualize it?
Many Thanks,
Johannes

Hello,

Create two copy of the module. Use "Duplicate" button on modules page.

If default site template menu is implemented a module then disable the module otherwise contact site template developers.
