Close submenu panel on click

Posted by donAtortugo - 2014/02/18 20:53

_____

Hello!

Im using this module in a site with ajax, so the browser doesn't reload, and when you click on a sub-menu item and load the content, that submenu panel keeps open. I want sub-menu panels to close when you click any menu item.

I've been looking for "mouseout" or "mouseleave" events in file ext-core.js, trying (vainly) to figure out how it works and reproduce the same behavior on "click" events.
So, is this possible?

Thx!

Hello,

It is possible, but it requires to modify javascript code of the menu.

Regards,
ARI Soft
