
Menu items delay

Posted by Meirzhan - 2014/02/19 04:29

Good day dear Arisoft team,

I have a problem. I have many items in my menu and because there is no delay it is uncomfortable to choose the right item. Is there a way to make a delay after menu pops out so that people can navigate more easily. <http://www.iccvortex.kz>

Hello,

The extension hides sub-menu when a user moves mouse outside the menu. When mouse cursor in menu area, sub-menu(s) are shown so it is not clear what's problem to select necessary menu item?

Regards,
ARI Soft

hi ari-soft team,

i have the same question. We have a large menu structure and for some users it's hard to navigate to the popup submenu. (see screenshot: horizontal main menu -> menu -> submenu popup). for example they experience problems to hit the an entry further down in the submenu. the submenu closes 'cause they left the mneuarea or hit an other menu entry from parent.

so my approach would be to delay the select event. i tried this with the source menu.js but it's not clear where and how to set it right :)

can you please give me advice how to set a delay?

thanks in advance
joka

Hello,

Where we can see the problem?

Regards,
ARI Soft
