Help on Customize ARI Ext Menu

Posted by battogtox - 2014/02/26 03:11
_____

Hello,

I have used ARI Ext Menu for my site http://bkh.inspection.gov.mn
And want 3 customization:
1. Horizontal Menu width to be 100% page width.
2. First level menus not linked to categories, just for display submenus.
3. Remove white space between horizontal menu and header flash image.

Please, help me? Thanks!

Hello,

1. The extension doesn't support this ability. It is possible to define width of each element one by one. You can read how to do it here.

2. Set menu item type to "System Links -> Text separator" or "System Links -> External URL" and use # as URL in Joomla! menu manager.

3. This padding is defined in site template styles. Add the following CSS rule to remove it:

BODY #breadcrumbs
{
 margin-top: 0;
}

Regards,
ARI Soft
