
Protostar error page

Posted by Foodstyling - 2014/03/20 04:54

Hello,
I'am using Ari ext menu on Joomla 3.2.3 with the protostar template and it works fine on all pages, except one. The menu does not work with error.php. After looking and posting on the Joomla forum, I think it has to do with a javascript problem, but I am not sure.

The site adress (in development) is and the errors with joomla are :

Call stack

Function Location

```
1 JApplicationCms->execute() JROOT/index.php:40
2 JApplicationSite->doExecute() JROOT/libraries/cms/application/cms.php:255
3 JApplicationSite->dispatch() JROOT/libraries/cms/application/site.php:208
4 JComponentHelper::renderComponent() JROOT/libraries/cms/application/site.php:178
5 JComponentHelper::executeComponent() JROOT/libraries/cms/component/helper.php:332
6 require_once() JROOT/libraries/cms/component/helper.php:352
7 JControllerLegacy->execute() JROOT/components/com_content/content.php:17
8 ContentController->display() JROOT/libraries/legacy/controller/legacy.php:722
9 JControllerLegacy->display() JROOT/components/com_content/controller.php:79
10 JCacheControllerView->get() JROOT/libraries/legacy/controller/legacy.php:681
11 ContentViewArticle->display() JROOT/libraries/joomla/cache/controller/view.php:98
12 JViewLegacy->get() JROOT/components/com_content/views/article/view.html.php:37
13 ContentModelArticle->getItem() JROOT/libraries/legacy/view/legacy.php:398
14 JError::raiseError() JROOT/components/com_content/models/article.php:162
15 JError::raise() JROOT/libraries/legacy/error/error.php:253
```

Thanks in advance for your help.

Hello,

You posted stack trace for the PHP error. It is not related to javascript errors and it contains nothing about "ARI Ext Menu" module.

Regards,
ARI Soft

Thanks for your answer, but could i concern a JQuery error?

"ARI Ext Menu" doesn't user jQuery library. BTW, if you want to see javascript errors, open browser's error console (for example press Ctrl+Shift+K in FireFox browser).
