flexible padding

Posted by Aschi - 2014/03/20 08:57

_____

Hi
I try to build a responsive template and would need the right- aud left-padding in the extended menu to be flexible.

This is the URL I try it out:
http://www.musicsite.ch/responsive/

This is what I entered:
#topmenu .ux-menu li a {
 padding: 10px 20% !important;
}
The padding still seems to be fix.
Thanks for your help and best regards
Aschi

_____

Hello,

Parent element ("LI") of "A" element has fixed width in pixels so padding of "A" element will have the same absolute value with any size of browser's window.

_____

Hi
Thanks for your answer.
I tried to correct the padding in menu.min.css, but nothing changes. Is there any possibility, to make this flexible?
Thanks and best regards
Aschi

_____

Information about menu HTML layout and CSS classes is available here. It can be useful if you want to customize the menu.
