## Manual background color change

Posted by jfbeaulieu - 2014/03/25 17:52

---

Hi,

I would like to change a specific background color for a specific menu item (LI) but i'm not able to find how I can do that on ARI Ext Menu. I used ARI YUI Menu before and it was preaty easy to change directly by CSS.

First of all, I just tried to manually change the background color of all LI of the Menu like this :

```
.ux-menu li {  
  background-color: #0099FF !important;  
  float: left;  
  padding-left: 0 !important;  
  position: relative;  
  width: 20%;
```

The background-color doesn't work at all. I pushed the Clear button on the side of Background color inside the ARI Ext Menu module administration but doesn't change anything.

How can I manually change the background color of any menu item (LI) without using the module adminstrator in backend ?

Thank you

=====

Hello,

Information about menu HTML layout and CSS classes is available [here](#). It can be helpful if you want to customize the menu and don't want to use parameters in module settings.
