Image instead of menu item
Posted by niesomaticus - 2014/03/28 16:02

Hello,

I want to show an image instead of one point of the menu. Normally you can use a seperator to display a image instead of the menu item.

Unfortunately, no image is displayed. :(Can you tell me how to implement it? :dry:

Regards
Niesomaticus

```
.ux-menu LI.ux-menu-item101>A
{
text-indent: -999em;
background-image: url(/templates/dd_sosassy_19/images/footerfacebookicon.png) !important;
background-repeat: no-repeat !important;
width: 30px;
}
```

Hello,

Your menu doesn't contain menu item with ID = 101.

I know it has been awhile since a post here but i needed to add a graphic to my menu. i was using ari yui menu and i downloaded ariextmenu and followed your code and it works fine..... now i am going to figure out the code i need to put in a graphic for the submenus.
thank you for your help even before i asked for it.i have both an image and the menu text next to it.

george

Use the same CSS rule, just specify correct menu item ID.
