Submenu not rendering properly on iphone.

Posted by ranger_lp - 2014/06/13 17:00

We are using your menu on http://apexthermal.com. However, on the iphone5s, the main menu blocks the sub menu. Is there a setting or some code that will fix this? The site renders properly on a pc.

TIA

Tony

Hello,

Sens an image where we can see the problem please.

Add the following CSS rule to "CSS Styles" parameter in module settings:

UL.ux-menu-sub {margin-top:-1px;z-index:20001;}
