
ext-core.js file issue

Posted by mohseng - 2014/06/15 05:17

Hi all,
The issue happens after updating FireFox to FireFox 30. A java script error logs in console. The error resource is ext-core.js file. "ReferenceError: batch is not defined".

this causes menu features like sub menus, does not appear.

Hello,

Where we can see the problem?

Regards,
ARI Soft

Hi,

The issue just appears on FireFox 30. A java script error logs on console.
Lower versions of FF and Webkit-based browsrs are okay.

This page (<http://melat.ir/>) contains this issue. If you see page on FireFox 30, a javascript error logs on console, and sub menus of ari ext menu does not appear.

thanks.

I am confused really :huh:

I think problem is with my firebug extension,(when I turn it off, the error disappears, otherwise I see error like image below:

<http://www.ari-soft.com/images/fbfiles/images/ff30-9727f72debb8bbc022b110ba7dbee5ba.png>

I checked the page with other FF30 browsers. You are right, it works fine.
(I think it is not important)

Thank you for your time
