## MainMenu is visible but no menu direction

Posted by HD42 - 2014/07/07 13:32

---

hey guys,

i could need your help.

This is my "homepage"  Page

I installed the Ari module. And i can see my top menu. But no dropdown/slide menu is shown. Why?
What do i need to change ?

This is the original topmenu from the template  http://www.ari-soft.com/images/fbfiles/images/2.JPG

And this one is the ARI topmenu

There is also a pronlem in the style (the bottom black line is missing). But the biggest problem is the missing dropdown menu.

So? How can i fix this problem

==========

Hello,

The page doesn't contain "ARI Ext Menu" module.

Regards,
ARI Soft

yes. sry. was trying out something. I shouldnt do that -_-

Now ARI is activated instead of the template topmenu.

Probably the module is configured incorrectly or main menu items don't contain sub-menu items.

hmmm i want to add one thing: I am a total newbie.

I managed to change some of the colours and the fontsize in some modules through the css (locating the right place worked out fine with firebug).

But how do i "activate" or add she submenu then ?

The configuration seems correct. Modul assignment is set for all aswell.

And thank you for your quick (!) help so far.

Menu items are created in Joomla! menu manger, not in module. See "Menus" menu item on Joomla! backend.

hmm ok. makes sense somehow. But where exactly -_- sry to ask this. but I am really new to this stuff.

Here some screenshots again (I even changed the language so I can follow your instructions^^).
