Hello,

"ARI Ext Menu" is a free module. If you "ARI Data Tables" extension, documentation how to use it is available in "Description" section on module settings page. Click by "Detailed help here" link and it appears into a lightbox.

Thanks.

I have seen that. How can i display data from my joomla database. I see column settings etc

Set "Choose source type" parameter to "SQL" and enter an SQL "SELECT" query in "SQL -> SQL query" parameter. For example if you want to show IDs and titles of articles, use the following SQL query:

```
SELECT
id,
title
FROM
#__content
```

Thanks.

How can one add a menu to display the module. Also how can one add it to an article.

Regards
Evarist

You can use "Content - ARI Data Tables" plugin to load "ARI Data Tables" module instances into articles. The plugin is included into "ARI Data Tables" package. Install and enable plugin and place the following plugin code into an article:

```
{aridatatables moduleId="MOD_ID"}/aridatatables}
```

Where MOD_ID is ID of "ARI Data Tables" module which you want to load. The module should be enabled. For example if you want to load a module with ID = 16, use the following plugin code:

```
{aridatatables moduleId="16"}/aridatatables}
```

About menu item, you can create a menu item for article with the module.
