Submenu overlap problem

Posted by cvrak - 2014/09/29 07:46

_____

Hi,

I've made an horizontal menu, with a vertical submenu, but I face a problem:
Some text links which are "below" the unfolding area of the submenu are not working.
The page's URL is http://www.plmlaw.gr/index.php?option=com_content&view=article&id=8&Itemid=123

Pls advise

Regards
Chris

Hello,

Could you send a screenshot where we can see the problem and specify what browser(s) you use?

Regards,
ARI Soft

_____

Hi,

I send you two screens.
At the first one, the "1" links area are not working. The "2" links are working fine.
At the second one, you can see how the submenu is unfolding.
I use Firefox, the URL is http://www.plmlaw.gr/index.php?option=com_content&view=article&id=8&Itemid=123

Thanks http://www.ari-soft.com/images/fbfiles/images/screen_01.jpg

_____

This problem with your site template:

 http://www.ari-soft.com/images/fbfiles/images/menu-13467dd4936a7f06daf99d3bc0492907.jpg

"Layer-9" container occupies space of "Layer-3" container.
