
submenu item not selectable, when main-menu items

Posted by edgkoller1 - 2014/11/10 08:30

When the width of the window is narrowed, the main menu items are shown in 2 or more lines. Then the submenu-items of the first line are covered by the items of the second line. So these submenu items are not selectable.

The 1. image shows the main menu in one line. So all submenu-items of "unser-Dorf" are selectable. The 2. image shows the narrowed main menu (covers 2 lines now) and the first submenu item of "unser-Dorf" is not selectable, because it is covered by the main menu item "Fotos" and "F-Schlange".
Solution: When submenu items are shown, they must have priority over the main menu items and must be selectable.

Hello,

Send a link to a page where we can see the problem.

Regards,
ARI Soft

You can see the problem on page: www.hasborn.de
When you narrow the window, so that the main menu must be displayed in more than one line, some of the submenu items will be covered by the main menu items.

The submenu items must always be on the highest layer.

Add the following CSS rule to "CSS Styles" parameter in module settings:

```
.ux-menu-sub {z-index:30000!important;}
```

Thanks for your answer. But I am new to Joomla and I don't know, in which file I have to add the code line. I am using the protostar template.
Is it the `../template/protostar/css/template.css`?

Open module settings page, find "CSS Styles" parameter and add the CSS rule to the parameter.

I added the code
.ux-menu-sub {z-index:30000!important;}
in the following files (delivered by ARI Soft)
menu.fix.css
menu.ie.min.css
menu.min.css
but nothing changed. The error is still there

None of these files contain the CSS rule. You can see it if try load them into a browser:

http://www.hasborn.de/modules/mod_ariextmenu/mod_ariextmenu/js/css/menu.fix.css

http://www.hasborn.de/modules/mod_ariextmenu/mod_ariextmenu/js/css/menu.min.css

BTW, we wrote add the CSS rule to "CSS Styles" parameter in module settings. We don't suggest add it to CSS files:

<http://www.ari-soft.com/images/fbfiles/images/css-126b50abda1588ac0c68c5f2b9e8845a.jpg>

Sorry, there is still another problem, when the main-menu uses more than one line. Now the submenu-items are shown, but when you move the cursor from mainmenu-item to the submenu-item, the submenu disappears. When you try this 3 or 4 times and move the cursor very slowly, then you can select the submenu item.
Do you have any idea, how to solve this problem. I have attached a copy of my module settings.
You can test it on www.hasborn.de <http://www.ari-soft.com/images/fbfiles/images/submenub.jpg>

Try to add the following CSS rule to "CSS Styles" parameter in module settings:

```
.ux-menu UL.ux-menu-sub{margin-top:-1px;}
```

Regards,
ARI Soft
