
Submenus not clickable in Joomla 3 on tablet

Posted by mhunter - 2014/12/17 18:32

Hello, I've just migrated my site to Joomla 3 but my submenus are now not working when viewed on an Android tablet (they are fine on desktop). The site is manxbatgroup.org. How can I fix this please?

Hello,

It works fine for us. We checked it in Google Chrome browser on Android device.

Thanks for your quick response. I can get it to work in Chrome (though it takes a few attempts to get the submenu to click through). However, I can't get it to work at all in Firefox.

It works well in FireFox for us.

Thank you. It's a mystery then. I will look at deleting your plugin and using another method.
